

Active Data Governance (ADG) Professional Services Offering

Establish Active Data Governance Best Practices

The delivery of data governance involves a lot more than tool selection. It requires people, processes and technology working together. To help, Alation's Professional Services team offers data governance best practices aligned to our framework to enable a People First data governance approach.

Establish a Data
Governance Framework

Establish Robust
Stewardship Processes

Accelerate Data
Governance Practices

Accelerate the Delivery of Active Data Governance

Alation's Active Data Governance App offering provides you with end-to-end best practices powered by automation. This ensures successful implementation and continuous improvement of your Active Data Governance program. The offering combines a set of defined data governance business processes with autonomous capabilities and supporting business practices. Together, these launch and define your governance efforts.

With this Professional Services offering, we tailor an approach to your organization's data governance needs, guide the establishment of a robust stewardship process, and lay the foundation to accelerate the start of your Active Data Governance practices, activities, and tasks.

Alation's ADG App offering allows organizations to establish a data governance framework, ingest assets, recognize business stewards, curate assets, apply policies and controls, collaborate with the community, and monitor and measure governance and curation activities.

The Professional Services ADG offering includes:

- Alation's Active & Autonomous Data Governance Approach
- Configuration of Alation's Data Governance App (separate purchase required)
- Lightweight Data Governance Assessment
- Best practices for:
 - Active and Automated Data Governance
 - Roles and Responsibilities
 - Business Stewardship Approach and Assignment
 - Policy Management in Policy Center
 - Metadata Classification and Management including glossaries, taxonomies, and domains
 - Managing Lineage
 - Addressing Data Quality
 - Implementing and Managing Workflows
 - Change Management in Alation
 - Data Governance Metrics to understand curation progress

The first company to bring a data catalog to market, Alation combines machine learning and human collaboration to change the way people find, understand, trust, use and reuse data. Created by experts in distributed systems, data management and design, the Alation Data Catalog creates a living inventory of data assets through an iterative process of data discovery and collaboration. More than 200 organizations, including American Family Insurance, Exelon, Munich Re, and Pfizer, leverage the Alation Data Catalog to gain confidence in data-driven decisions.
